Why two windows? ANAC's official regulatory window is 00:00–05:59. We also track our own wider **Extended window (23:00–06:59)** because a full night's rest for residents doesn't start and stop exactly at the legal boundary — a loud approach at 23:15 or 06:45 still disturbs sleep, even though it falls outside ANAC's jurisdiction. Extended-window alerts outside 00:00–05:59 are **not** regulatory violations — they're the same noise thresholds applied for resident-experience tracking only.

Thresholds (fixed, same as archive.html): ● Red ≥ 98.9 dB (ANAC's absolute night limit) · 🌟 Yellow 93.0–95.9 dB (ANAC level 2, exempt 00:00–00:30 and 05:00–06:00) · 🟡 Orange 95.9–98.9 dB. **Orange is not an ANAC-defined tier** — the regulation itself only defines Yellow and Red, with nothing in between. A flight at 97 dB (just 1.9 dB under the absolute ban) used to fall through that gap and vanish from every count. Orange closes it: our own tracking, same spirit as the Extended window, never presented as a legal violation. Daytime loud events are reported separately, further below, with no ANAC threshold applied — the regulation only covers night hours.

Methodology update (Sept. 2026): Red/Yellow alerts now use ANAC's fixed regulatory noise thresholds (98.9 dB / 93.0–95.9 dB), consistent across all months and matching the rest of the site. Earlier reports used a per-month dynamic threshold, which produced counts that could not be compared month to month. A second fix (also Sept. 2026): flights between 95.9 dB and 98.9 dB fell into a gap between ANAC's two official tiers and were silently uncounted — a new Orange tier now tracks them (not an ANAC-defined level, see the alerts page for the full explanation).

❗ **Airline attribution corrected (26–27 Sept 2026):** about 2,000 flights across the whole archive were reassigned to their real airline after an audit against public aircraft registries and the callsigns each aircraft broadcast. An old rule guessed the airline from the radio address, which is allocated by country, not by airline (e.g. about 1,000 Azores Airlines flights had been counted as TAP). Noise figures are unaffected; airline rankings in earlier reports (May–August) were computed before this fix. Helicopters and military aircraft are now excluded from airline rankings. Full dated list: lisbonfinals.com/archive.html, Data Quality tab.
