EXPERT INSIGHT — JUNE 2026

98.5% of night alerts are arrivals — runway 02 approach path crosses Lisbon at 160m altitude. **TAP Air Portugal** operated 4,772 flights (50% of total), including 707 at night. **Sound meter recalibrated June 22** — readings from June 10–22 were captured at trigger rather than peak, with a 100 dB ceiling; loud events in that window are likely underreported.

9	LATAM Airlines		8	1	7
10	Azul		7	1	6

Why two windows? ANAC's official regulatory window is 00:00–05:59. We also track our own wider **Extended window (23:00–06:59)** because a full night's rest for residents doesn't start and stop exactly at the legal boundary — a loud approach at 23:15 or 06:45 still disturbs sleep, even though it falls outside ANAC's jurisdiction. Extended-window alerts outside 00:00–05:59 are **not** regulatory violations — they're the same noise threshold applied for resident-experience tracking only.

Thresholds (fixed, same as archive.html): ● Red ≥ 98.9 dB (ANAC's absolute night limit) · 🌟 Yellow 93.0–95.9 dB (ANAC level 2, exempt 00:00–00:30 and 05:00–06:00). Daytime loud events are reported separately, further below, with no ANAC threshold applied — the regulation only covers night hours.

Methodology update (Sept. 2026): Red/Yellow alerts now use ANAC's fixed regulatory noise thresholds (98.9 dB / 93.0–95.9 dB), consistent across all months and matching the rest of the site. Earlier reports used a per-month dynamic threshold, which produced counts that could not be compared month to month — this report was regenerated with the corrected methodology.

⚠️ **Hardware note:** Sound meter recalibrated June 22 — readings from June 10–22 were captured at trigger rather than peak, with a 100 dB ceiling. Values from June 22 onward reflect the fixed, uncapped sensor.
